# **BINSON**

## **BINSON Echorec**

With echo, sound takes on a new dimension, a new living depth to add quality and dramatic vividness in a way that never fails to thrill. So far, even with the most modern techniques, use of echo has been confined to recording and broadcasting studios using special «echo chambers». Now, the Binson «Echorec» Unit does better, and all within the space of a portable electronic unit, which can be matched to any existing amplifying system. With it, echo can be added to the sound signal with the echo-interval timed as desired.

Swell may also be added and re-inforced with reverberation. The Binson «Echorec» is extremely simple to use, needing no special knowledge or skill. It will accept inputs from microphones or other electronic sound sources, mixing them as desired with controlled effects on each stage. For performers with live audiences, for recording engineers and other experts, the «Echorec» opens the door to a whole fascinating new world of sound effects hitherto confined almost exclusively to commercially produced records.

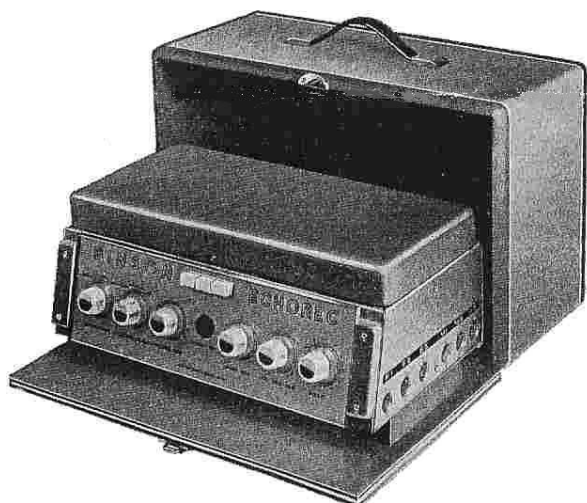

Leading names in show business as well as sound engineers, composers, etc., are fast learning the value of this remarkable instrument. It fills a long-felt need in modern sound reproduction, and is unique in its field.

mod. Baby - With Echo-Swell-Repetition - Single channel.

Size: 325 x 180 x 245 mm.

Weight: Kg. 8 c.a.

mod. Echorec 1° - With Echo-Swell-Repetition - 3 channels with push button selection.

Size: 410 x 270 x 200 mm.

Weight: Kg. 12 c.a.

mod. Echorec 2° - With Echo-Swell-Repetition-Reverberation - 3 channels with push button selection.

Size: 410 x 270 x 200 mm.

Weight: Kg. 12 c.a.
